About me

I am a Data Science Technology undergraduate with strong experience in data analytics, AI, and data-driven problem solving. Experienced in transforming complex data into meaningful insights through analysis, visualization, and interactive dashboards, with additional strengths in visual storytelling and digital design. Experienced in leading creative teams, managing student-led projects, and competing in national data science, analytics, and design competitions.

Skills

Programming Languages
Data Handling & Analysis
Data Engineering & Databases
Machine Learning & NLP
Programming & Web Development
GIS Software
AI Tools & Frameworks
Version Control & Platforms
Design & Multimedia Tools

// Python, C++, SQL, R, HTML, CSS, JavaScript
// Google Colab, R, Visual Studio Code, Tableau, PowerBI
// SQL, Database Design, ETL Pipelines, Vector Databases

// Data Processing Automation, OpenAI API Integration
// GitHub, Git
// Adobe Illustrator, Premiere Pro, After Effects, InDesign, Figma

Analisis Penerapan Strategy on Education for Health and Well being UNESCO dengan Indikator SDG di Indonesia

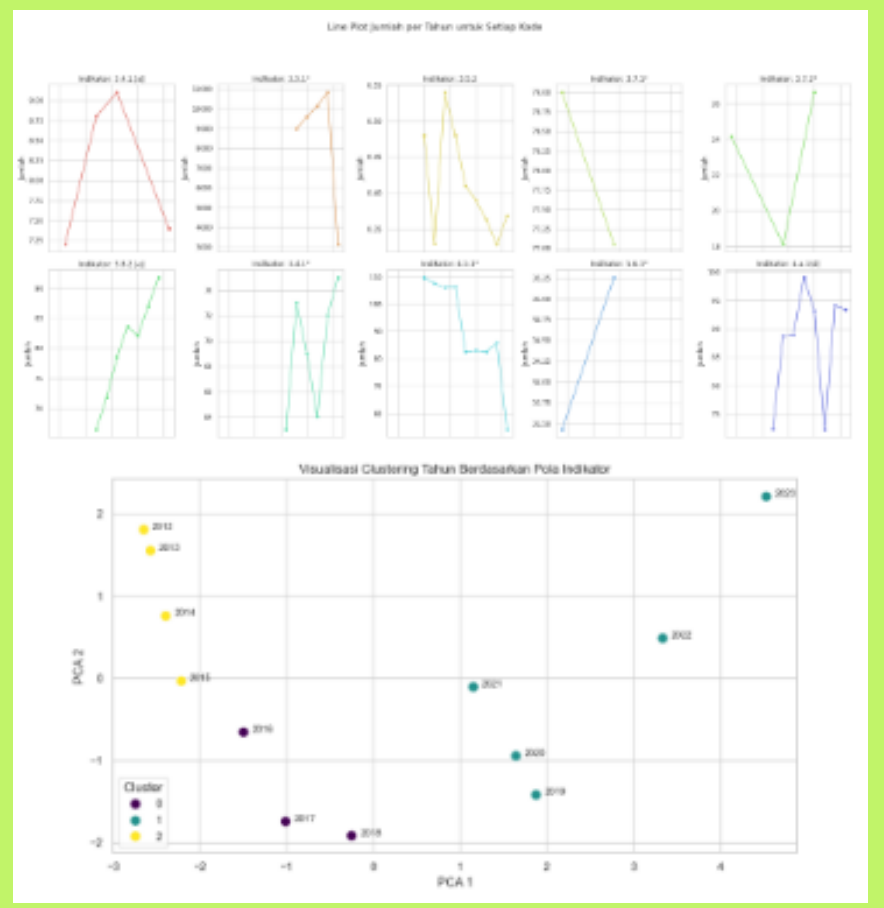

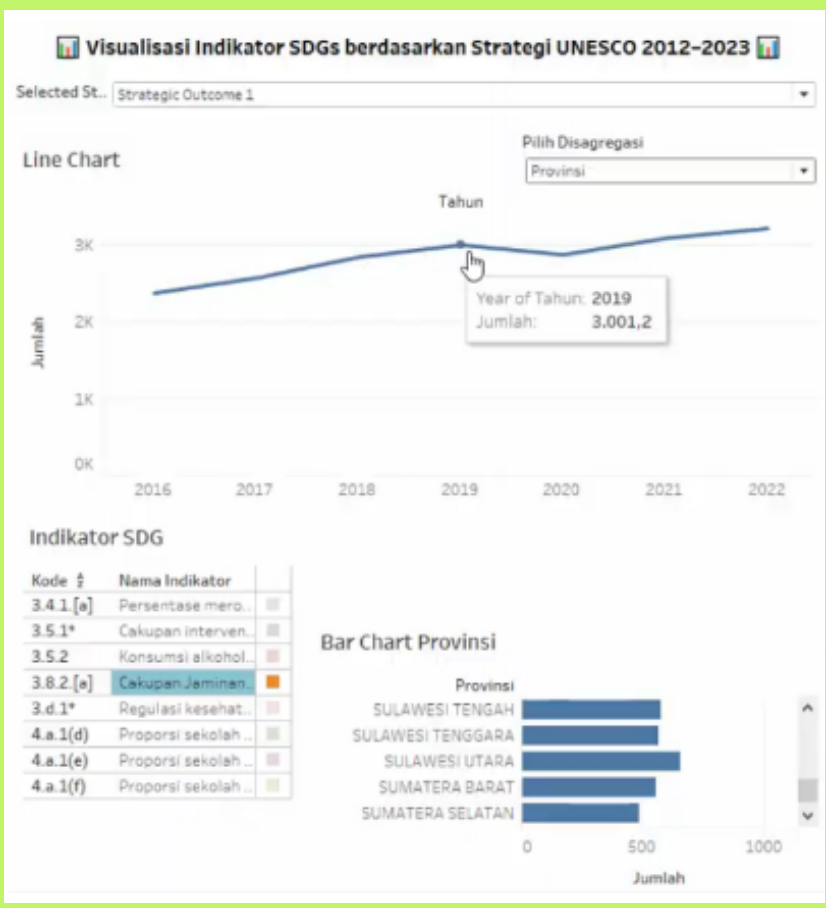

Year Accomplished 2025

Role/Position Data Analyst (Individual Project)

Publication Link [github-project-1-link](#)

Clustering analysis of Indonesian provinces based on education & health indicators (2012–2023)

- **Purpose:** Identify regional patterns in how provinces implemented UNESCO's strategy, to inform policy
- **Finding:** Provinces grouped into distinct clusters with different implementation gaps, revealing which regions need targeted intervention
- **Learned:** Consolidating and aligning data from multiple inconsistent sources; building dashboards in Tableau
- **Achievement:** 3rd Place, Data Science Category, IMITCOMP 2025

Analisis Efektivitas Promosi Digital Konten Investasi Pariwisata Kementerian Pariwisata

Year Accomplished 2026

Role/Position Team Lead / Cross-Platform Analysis

Publication Link [github-project-3-link](#)

Cross-platform analysis of Kemenpar's digital promotion of tourism investment content

- **Purpose:** Solve a real client case: identify which channels/content most effectively attract investors
- **Finding:** Clear performance gaps against Kemenpar's own LAKIN 2025 targets, pinpointing where investment-promotion content underperforms
- **Learned:** Solving a real client problem with a data-driven approach; explaining findings simply to a non-technical client

PPOB Business Dashboard

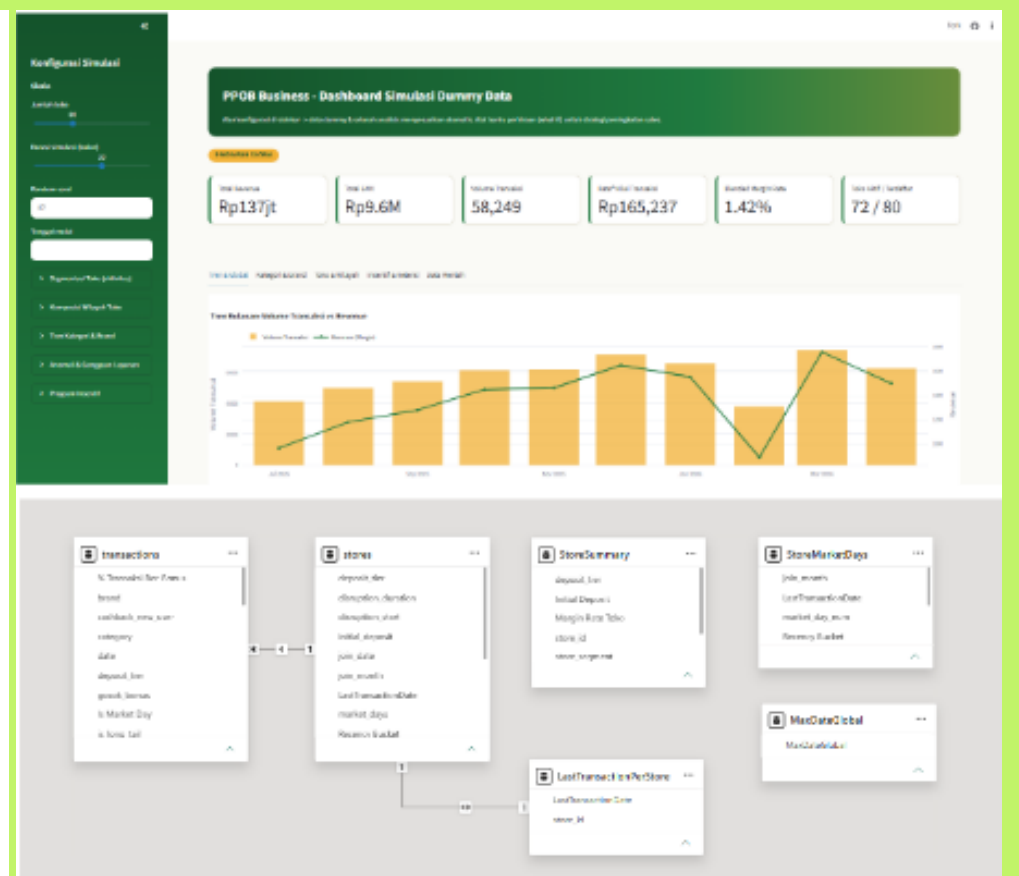

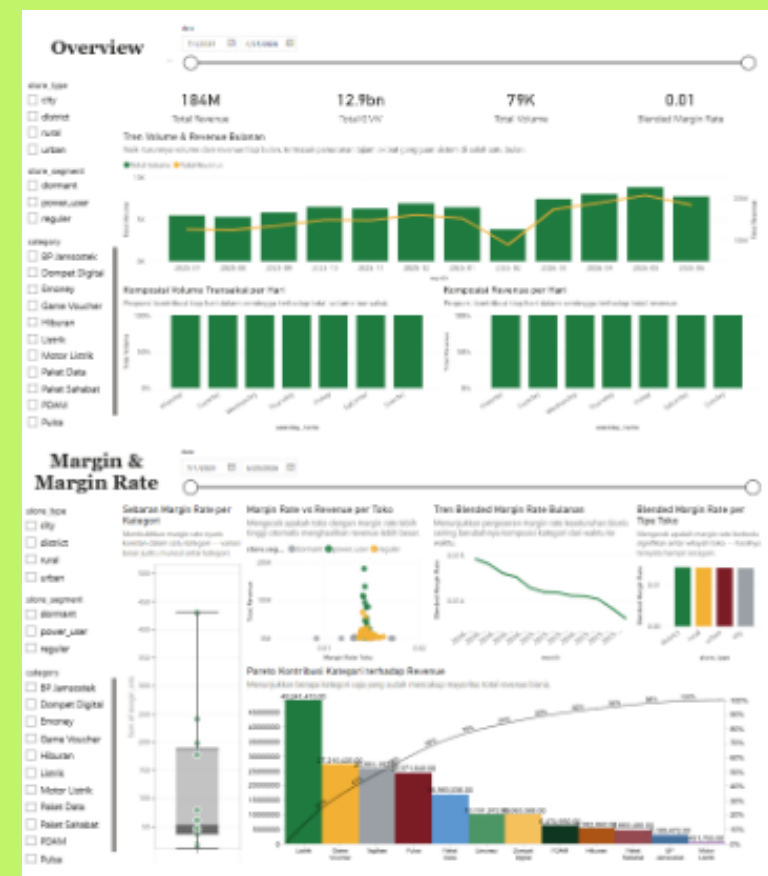

Year Accomplished 2026

Role/Position Data Scientist Intern (Individual Project)

Publication Link [github-project-4-link](#)

- **Purpose:** Give the business team tools to understand sales drivers and test incentive-program scenarios, despite no real transaction data
- **Finding:** Simulated revenue and segmentation patterns surfaced which product categories and stores respond most to incentive changes
- **Learned:** Generating realistic synthetic data through research; building a relational data model and measures in Power BI

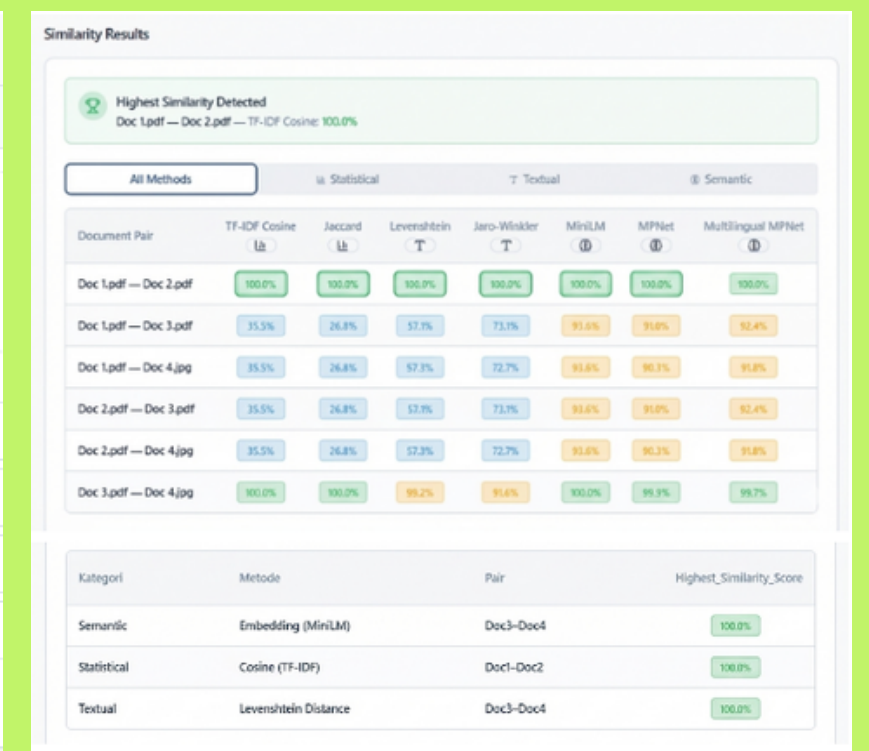

Sales performance dashboard + scenario simulator for a PPOB (payment point) business

Transformasi Digital Layanan Kereta Api Menuju Pelayanan Publik yang Prima di 2045

Year Accomplished 2025

Role/Position Team Lead; concept, visual storytelling & design
Publication Link [github-design-1-link](#)

Created an infographic on Indonesia's railway digital transformation using data analysis and visual storytelling. Analyzed trends in passenger volume, station activity, and digital readiness, and applied exponential smoothing for future projections. Translated complex data into clear visuals aligned with the Indonesia Emas 2045 vision, enhancing public understanding through engaging, data-driven narratives. Placed among the Top 10 National Finalists in the Infographic Category of the 4C National Competition by Universitas Brawijaya.

Green Hydrogen dalam Program Langit Biru: Solusi Bersih untuk Kualitas Udara yang Lebih Baik di Indonesia

Year Accomplished 2024

Role/Position Team Lead; concept, visual storytelling & design

Publication Link [github-design-2-link](#)

Designed an infographic on air quality in Indonesia, applying time-series forecasting (ARIMA) to project future Air Quality Index (IKU) trends from 2024 to 2030. Mapped regional air quality data and analyzed pollution sources (NO2, SO2) to support the case for green hydrogen solutions. Effectively communicated complex environmental data into a clear, visually engaging narrative aligned with sustainable development goals (SDGs). Won Best Infographic in the Visual Quest Category of Aironology 3.0 by Universitas Airlangga.

eCommerce & Gen Z: Kunci Pertumbuhan Ekonomi di Era Digital

Year Accomplished 2025

Role/Position Individual Project

Publication Link [github-design-3-link](#)

Created a data-driven infographic showcasing Gen Z’s pivotal role in Indonesia’s eCommerce growth using multi-source statistics (BPS, Populix, Katadata). Visualized temporal growth trends (2017–2023), regional eCommerce distribution, and projections to 2030. Combined demographic insights with digital behavior to narrate a compelling story of economic transformation through Gen Z participation.

Forest City: Urban Planning Berbasis Hutan untuk Kontribusi Keberlanjutan Indonesia

Year Accomplished 2025

Role/Position Team Lead; concept, visual storytelling & design

Publication Link [github-design-4-link](#)

Created a compelling infographic to communicate the urgent need for sustainable urban planning through the "Forest City" concept. Analyzed multi-source datasets on urban population growth, forest cover decline, and deforestation trends to emphasize the ecological impact of rapid urbanization. Translated complex environmental metrics into intuitive visuals, connecting them with actionable urban solutions. Effectively integrated narrative elements and infographics to demonstrate how green infrastructure, community engagement, and biodiversity conservation can support climate goals and Sustainable Development Goals (SDGs).

Buka Data, Bongkar Dusta: Lawan Isu Hoaks Pemilu dengan Data Journalism

Year Accomplished 2025

Role/Position Team Lead; concept, visual storytelling & design

Publication Link [github-design-5-link](#)

Created a compelling data journalism piece dissecting political hoaxes during the 2024 Indonesian election using clustering, word cloud analysis, and time series charts. Applied advanced data filtering and visualization techniques to expose misinformation patterns, highlight media platforms with high hoax incidence, and communicate verified facts in an accessible narrative format.
